PROFESSIONAL OBJECTIVE

I'm a self-taught software engineer who learned by building, experimenting, and using modern AI tools to accelerate my understanding of software development. I'm now looking for an entry-level or internship-level full-stack role where I can apply my foundation, learn from experienced mentors, and contribute to software that solves meaningful problems.

TECHNICAL SKILLS

JavaScript, TypeScript, HTML/CSS, Python, React, Vite, Next.js, TailwindCSS, Firebase, Node.js, Express, Redis, PostgreSQL, MySQL, Prisma, Git, AWS, Render, Vercel, Opencode, Codex, Antigravity

PROFESSIONAL EXPERIENCE & PROJECTS

HandyANDY | Remote Freelance | Full-Stack Developer 2026 - Present

- Built and deployed a full-stack application using Next.js, PostgreSQL, Prisma, and Redis on Vercel, implementing Google OAuth authentication and role-based access control.
- Patched a critical Next.js security vulnerability (CVE-2025-66478) by upgrading to a secure, compatible version, while implementing a role-based admin dashboard and Prisma/PostgreSQL schema to securely manage client inquiries.
- Collaborated directly with clients to translate business requirements into technical solutions, designing and delivering software tailored to user needs and incorporating feedback throughout development.

Nova Athletic Club | Student Services Assistant 2017 - 2018

- Assisted with front desk operations, including answering and directing phone calls from parents.
- Maintained a clean, organized, and welcome environment for students and visitors.

UberCuts (In Production) | Full-Stack Developer

- Engineered role-based authentication with Firebase and PostgreSQL, synchronizing user identities and permissions across admin, moderator, and user roles while ensuring idempotent account provisioning and updates.
- Optimized dashboard data fetching with TanStack Query caching and implemented Redis-based per-user rate limiting to reduce redundant requests and improve application performance.
- Implemented real-time camera-based facial analysis using Google Task Vision in a dedicated Web Worker, offloading compute-intensive processing from the main thread.

Stock Scanner | Full-Stack Developer

- Designed MySQL schemas and optimized data retrieval by concurrently processing up to 100 ticker symbols with p-limit, while implementing retry logic and a write queue to resolve database deadlocks and improve reliability of database operations.

EDUCATION & CERTIFICATIONS

CUNY Brooklyn College

May 2025

B.S. Computer Science | GPA: > 3.5

Honors & Awards: Dean's list, ASME Inspire, EJK Book Award, National Junior Honor Society
